SOIL COMPACTORS

Landfill compactors are essential equipment for mantaining refuse landfill sites. This compactor can push, spread, pulverize, demolish, and compact refuse effectively. Using this type of compactor helps save and protect the environment and extend the operating life of landfill sites.

The constant direction changes, poor underfoot conditions and debris riddled environment of the landfill are easily managed by the rugged and dependable Rhino Soil Compactors drive train components.

Infrared cameras and backup buzzer provide extra safety for the operator and its environment.

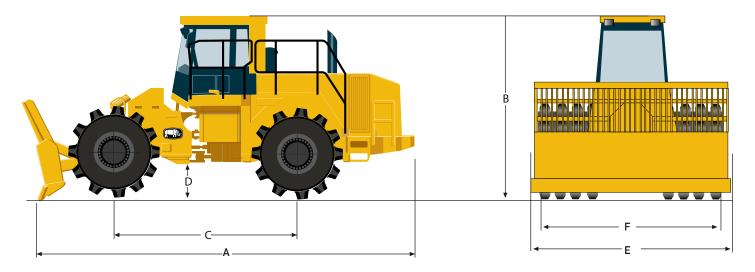

Different types of baldes are available to our customers for dozing or spreading to match site requirements.
